Art Unit: 1711

1. Applicant has not complied with one or more conditions for receiving the benefit of an earlier filing date under 35 U.S.C. 120 as follows:

An application in which the benefits of an earlier application are desired must contain a specific reference to the prior application(s) in the first sentence of the specification or in an application data sheet (37 CFR 1.78(a)(2) and (a)(5)). The specific reference to any prior nonprovisional application must include the relationship (i.e., continuation, divisional, or continuation-in-part) between the applications except when the reference is to a prior application of a CPA assigned the same application number.

2. Claim 47 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Applicants have claimed that compound (ab) further includes a group selected from the group consisting of primary amino, secondary amino, and hydroxyl groups; however, it is unclear if this further group is present in addition to the active hydrogen referred to within claim 46.

3. Claims 48 and 49 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Applicants have failed to define compound (j).

4. Claims 46-50 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant

art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Adequate support has not been provided for the "greater than no" language, added by the amendment of March 1, 2004. Furthermore, with respect to the various reactive groups, it is unclear what is meant by the language, "having less than two and greater than no". Is this simply a way of claiming one group or is it intended to somehow convey fractional values greater than zero but less than two? If the latter is the case, then it is unclear how compounds are to have a fractional number of groups or if the fractional values are to denote average numbers of groups.

5. Claims 46 and 47 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. It is unclear how compound (ab) having at least one active hydrogen is to react with the unsaturated carbonyl or nitrile compounds when the active hydrogen is present as a hydroxyl group.
